New York, April, 1875.

Sir:

We have much pleasure in calling your attention to this new and much enlarged edition of our Illustrated Catalogue of Statuary, Fountains, Vases, Settees, Crestings, Railings, Lamp Posts and Stable Fittings.

Being convinced of the growing taste for, and appreciation of, the artistic and ornamental in our manufactures we have spared no exertions or expense in securing the very best talent in getting up new and original designs; also, in procuring models and designs from some of the most celebrated manufactories in Germany, France and England. We have observed a judicious care in our selection, and think there is nothing here represented which does not possess some artistic merit, and certainly none which can offend a refined and cultivated taste.

It being our intention to still increase and enlarge this Department, we shall issue supplementary sheets from time to time.

Samples of most of our goods can be seen at our Show Rooms, St. George Building, 90 Beekman cor. Cliff Street, some of our very large Fountains, however, can only be seen at our Foundry.

Careful attention given to packing and shipping. Special attention to orders for export. Soliciting your orders, we remain,

Yours respectfully,

The J. L. Mott Iron Works.

STATUARY.

All the Statuary represented in this Catalogue is cast in Zinc, which is superior to Iron for this purpose from the fact that it can be cast in pieces, and when carefully fitted by skilled workmen, retains nearly all the delicate finish and beauty of line to be found in the original. It is also more enduring, as it cannot be affected by the weather like stone or marble; and again, should any part of the figure by accident be broken, it can easily, and at a mere nominal expense, be repaired; whereas, with Iron or Marble such damage is irreparable.

Although the figures can be painted or bronzed in any style to suit the taste of the purchaser, we however, take this opportunity of giving our opinion as to the style and manner of painting or bronzing, which we think most suitable for the various figures.

Animals, such as Game Dogs, Deer, &c. may be painted to imitate their natural color with very good effect. Mythological subjects, such as the Sphinx, Griffins, Dragons, large Dogs such as the Antique and St. Bernard, also Lions and Horses, should either be painted

a stone color, or bronzed; large emblematic figures such as Industry, Justice, Commerce, and other figures used chiefly for buildings, look well bronzed, but can be painted white, or sanded in imitation of brown stone, whichever is more suitable for the building on which they may be placed.

Our Figures, representing the best works of art, ancient and modern, can either be bronzed or painted white to suit the taste of the purchaser. Such figures as Kiss' Amazon, for instance, should always be bronzed, in fact nearly all the Statuary herein represented look well bronzed, although we should prefer such Figures as are used for Cemetery purposes painted white as being more appropriate, also Figures which show but little drapery can be painted white with good effect.

Among the many additions we have made to this branch we would particularly call attention to Canova's Hebe, one of the very best works of that great master, also Rauch's Victoria, said to be the finest work in modern sculpture.

We have also added some very beautiful and artistic Candelabrum.

FOUNTAINS AND VASES.

Ornamental Fountains and Vases may be carved in marble or stone, moulded in Terra Cotta and Stucco, or cast in Iron or Bronze. The finest works are those carved in marble by skilled artists, but the very great cost which is involved, renders their use rare. Stone, though not so expensive a material as marble, cannot be sculptured well without considerable cost, but Fountains, and other similar objects are sometimes made at comparatively low prices by men who are rather masons than sculptors, and who produce inartistic designs in a coarse and crude style. Cheap stone will crack and decay when exposed to wet weather. The art of moulding in Terra Cotta has been revived and much improved during the last few years and very beautiful objects are produced from this material. Fountains, however, are seldom made of Terra Cotta, and Vases of this material are easily chipped and broken. It will, as well as Stucco, crack and crumble away when exposed to wet or frost. The art of casting ornamental objects in metal is an old one, although, only in its infancy in this country, and we flatter ourselves to have made very rapid advances in the art. The use of Cast Iron or Bronze permits a sharpness and delicacy of outline which is impossible in Stone or Stucco, and the fine moulding sand and quality of Iron used by us, allows a smoothness of surface not otherwise easily attainable.

Cast Iron Fountains and Vases, if occasionally painted, are imperishable and will not crack when exposed to wet or frosty weather.

Vases may be painted every three or four years; but unless the paint has been washed off this is not necessary, and to many people the old weather-beaten appearance is preferable to new paint.

Some of the most elaborate designs in Fountains and Vases look beautifully bronzed, which can be done at a very little extra cost, and will last and look well for a long time. The very large Fountains, however, are invariably painted stone color.

In this branch, as you will see, we have been particularly busy, and can now offer some of the largest, most elaborate and artistic Fountains that have yet been made in this country, and all from strictly original designs. We have also added some very elegant Drinking Fountains for Streets and Parks.

We have also many new and elegant Vases to offer, and would particularly call attention to our new Pedestals.

SETTEES.

In Settees and Garden Chairs we have the largest variety and most elaborate designs to be found anywhere, comprising Park Settees, Light Settees for Lawns and Croquet

Grounds, and the more elaborate designs for Terraces or Private Gardens. All our Settees, excepting Park Settees, the Iron work of which is painted, are very beautifully bronzed.

CRESTINGS, RAILINGS, LAMP POSTS, &c.

This branch we might say is an altogether new addition since the publication of our last Catalogue. Our designs are entirely new and original and comprise a variety and style suitable for all purposes. Crestings for all styles and sizes of buildings, plain or

elaborate in design. Railings for Cemetery and other purposes. Lamp Posts for Streets, Hotels and Public Buildings.

NOTE.—Great care should be taken when ordering goods to give the correct number of the Engraving in this Catalogue; also the name, if any. In Statuary, seeing there are several figures of the same name, the name of the Sculptor should also be given.

We also manufacture PIPE FITTINGS, TANKS, VALVES, &c., for Green House purposes, for which we issue a separate Catalogue. Same can be had, or sent by mail, on application.

EXTRACT FROM JUDGES' REPORT.

"Separately noticeable is a Large Fountain, of fine proportions and exquisite workmanship, significantly illustrative of American skill in the finer productions of Iron Manufacture."

Extract from the Report of Col. Sandford, British Centennial Commission. Reprinted in "The Iron Age," of August 9th, 1877.

"In the Exhibition, by far the largest and most important display was that of J. L. MOTT IRON WORKS, New York.

* * * * "A large Fountain in the center circle of the Main Building was throughout of the highest character, and extracted praise from every one who inspected it."

From Gebbie & Barrie's "Masterpieces of the U. S. International Exhibition, 1876."

Plate 90.
FOUNTAIN, "CENTENNIAL."
DESIGN PATENTED.

Total height 26 feet.

Diameter of first Pan 11 feet 4 inches. Diameter of second Pan 7 feet. Diameter of third Pan 4 feet 4 inches.

Diameter of Ground Basin 30 feet.

NOTE.—The smallness of the above cut gives but a very inadequate idea of the above Fountain, either as to size, style or finish. The Ground Basin should, for this Fountain, never be less than 30 feet, but larger if possible.

NOTE.—The above Basin is suitable for any Fountain not over 6 or 7 feet high, and throwing a moderate stream of water, such as
Nos. 71, 72, 76, &c.

We also make two smaller sizes of these Drinking Fountain Basins, viz.: 8 feet diameter and 10 feet 6 inches diameter,
each with 4 Drinking Fountains and 8 Drinking Spouts, which should be used with smaller Fountains. We would recommend
Nos. 68, 45 and 78 as suitable for the 8 feet, and No. 61, 80 and 81 for the 10 feet 6 inches.
